Transportation Road Traffic

PROJECT DESCRIPTION

- North-South Tramline will be constructed from the Intermodal Transportation Terminal to Nene Tereza Square. The tramline passes through the existing Tirana-Durres railway and main boulevards including the new section.
- New rail-based transportation airport line will be constructed from the Intermodal Transportation Terminal to Tirana Airport. It passes through the existing Tirana-Durres railway and a new section up to Airport will be constructed.

OVERALL OBJECTIVE

- The project aims to construct the new North-South Tramline and the new rail-based transportation airport lines.
- North-South Tramline (Intermodal Transportation Terminal-Mother Tereza Square), will support the new business and commercial activities along Zogu I Boulevard as well as passenger transportation between the planned Intermodal Transportation Terminal and the city center. It will be about 6.2 Km long and will have a commercial speed of 20 Km/hour. It aims to reduce the travel time of the public transport mode. It will also serve as the core transport for Transit Oriented Development (TOD).
- The construction of new rail-based transportation airport line from Intermodal Transportation Terminal to Tirana Airport has a great potential for fast, reliable, and comfortable transportation services regardless of road traffic congestion. It will be about 14 Km long.

PRELIMINARY IMPACT

- ⇒ The anticipated impact from the project North-South Tramline implementation is to support the new business and commercial activities along the north-south boulevard as well as to transport passengers between the planned Intermodal Transportation Terminal and Nene Tereza Square.
- ⇒ The anticipated impact from the project of new rail-based transportation airport line implementation will significantly enhance the usage of passenger transportation which currently consists of only private vehicles or buses.
