PROJECT DESCRIPTION

“Isa Boletini” primary school is located in Administrative Unit No.11, an area that has experienced a dramatic increase in population during the recent years. The school serves approximately 1100 school children, but planning to transform it into a community center it is expected to serve an additional 950 – 1000 members of the community. The project envisages the construction of an additional 3 floor wing in the northern part of the existing facility which would add a total of 17 additional classrooms, 3 hydro-sanitary facilities, a medical room and one administration office with a total area of 1355 square meters. Part of the project consists in the upgrading of the electricity grid, the water supply system, fire protection system and the installation of the heating system.

OVERALL OBJECTIVE

The project will improve the conditions and capacities for teaching and by adding additional space will allow for a better reorganization of the entire layout of the facility. The extra capacities will also improve conditions in the classroom by addressing overcrowding as one of the main problems faced by the school and the two shift teaching that takes place due to the lack of classrooms.

PROJECT IMPLEMENTATION MODALITY

The school suffers from a lack of capacity and overcrowding, as well as from lack of recreational areas and proper heating and electrical systems. The list of activities that the project entails is as follows:

- Construction of an additional wing to increase capacity;
- The creation of recreational spaces for attendance not only by school children but also for use by the community;
- Improvement of the technical teaching facilities and laboratories;
- Increasing the efficiency of energy use, through the installation of the heating system.
